WE FEED ALL!

40 YEARS KNOW-HOW

For small and large farms
(Germany, Denmark, Scandinavia,
Netherlands, China, Japan, Australia)

EASY & RELIABLE

- Energy efficient
- Easy operation
- Simple maintenance

INCREASE OF WEIGHT AND PROFIT

- Modern design
- Best hygienic
- Healthy pigs

SIMPLE!

- Manual operations
- Automatic processes
- Individual monitoring

DRY FEEDING

TEWE supplies the entire dry feeding equipment for manual or fully automatic operation. The construction of the surface-hardened chain is hard-wearing and robust. The feeding system is easy to assemble and maintain.

The TEWE scope of supply includes feeding machine, deflection corners, pipes, silo connection, safety sensor, inspection pipe, telescopic outlet and T- and Y-double valves.

The control software is available in all languages and can easily be extended with additional functions, such as monitoring and documentation.

LIQUID FEEDING

Advantages: quick weight increase due to high feed consumption especially in piglets, minimal feed losses, better feed digestion, increased vitality and health status.

TEWE looks back on 40 years of know-how in Germany, Denmark, Scandinavia, Netherlands, China, Japan, Australia. With TEWE you are economically on the safe side. The liquid feeding system is efficient, with high feeding accuracy and compliance with the highest hygiene standards.

COMBINED FEEDING – DRY & LIQUID

The future of successful pig feeding! Most experienced and efficient pig producers in Europe rely on the combined feeding technology for optimally matched dry and liquid feeding.

A fully automatic feeding system that supplies individual single feeding places or long troughs with individually mixed batches of dry or liquid feed via a pneumatic AIRFEED conveyor system. An automatic diverter valve transports the feed individually to each pig or to groups of pigs at high speed.

Advantages: absolutely no hygiene problems, feeding accurate to the gram, only 1 highly efficient feeding system for all animal categories, easy to maintain.

INDIVIDUAL FEEDING

Best efficiency for professional livestock. TEWE supplies the professional and fully automatic individual feeding for sows or group housing according to their needs. The System can feed both dry or liquid.

The software controller runs mixture for each feeding place. The controller is dosing the exact measured quantities from single components into the weighing mixer to prepare the precise and individual mixtures.

ALL-IN-ONE SOFTWARE

TEWE supplies all manual up to fully automatic types of software controls for feeding technology. The hard and software is designed and manufactured by TEWE in Germany. The system is robust, durable and easy to operate. The controller meets the requirements to all climatic environments.

The system can be extended for the recognition of the ear tags of each single pig.
